An analysis of quantitative and qualitative database of HEEACT's accreditation

This plan continues to use database that established by 'A Pilot Study of Establishing Universities Evaluation Information Platform'. The database normalization makes it easy to understand the format, read and management information. Qualitative analysis from university evaluation data can find out which indicators are not clear to the committee. Besides, the quantitative data will be used to study correlation between program accreditation and institutional accreditation, and the analysis of qualitative data can find out deficiency in schools which failed to achieve accreditation. Then, the integration of quantitative data and qualitative data can be provided to committee training and indicators established for references.
