**Autonomous Program Quality Assurance Implementation Plan for Higher Education Institutions**

This project is based on the the previous voluntary program quality assurance implementation plan, incorporating the concepts of the third-cycle institutional review plan, opinions and suggestions from experts, scholars, and stakeholders, as well as the policy directions of the Ministry of Education. It aims to develop a new cycle of autonomous program quality assurance implementation plan for higher education institutions, covering quality assurance indicators, quality assurance procedures, methods of feedback on quality assurance results, duration and other relevant aspects.

The project will be executed through working group meetings, experts and universities' stakeholders consultation meetings, universities orientation, and by incorporating the results of the meta-evaluation conducted after the previous cycle of autonomous program quality assurance. Various measures will be taken to enhance the different aspects of autonomous program quality assurance, ensuring the quality of the implementation plan aligns with international standards.

In terms of research outcomes, the project developes the " HEEACT Program Accreditation Implementation Plan " and the " Recognition of Self-Accreditation Implementation Plan."

Key words: autonomous program quality assurance, quality assurance, higher education institution
